## Project Overview

**Brief Project Description:** (2-3 sentences describing what your team built)

TeamUp is a platform that helps students get involved in university life beyond academics. It connects them with clubs, events, and teammates for projects or competitions, making it easier to grow socially and professionally.

## Technologies Used:

We used VS Code, Figma, Canva, and ChatGPT tools for design and development. The prototype was created in Figma with AI assistance. The project is built with HTML, CSS, and JavaScript, using React, Node.js, and Next.js frameworks. Firebase Firestore is used for database and authentication, and moderation is handled by the GPT-4o model connected through the OpenAI API.

## Target Problem/Challenge:

Many students struggle to find communities, events, or teammates that match their interests outside the classroom. This leads to missed opportunities for personal growth, networking, and collaboration.

## Individual Contributions
